### TFOCA Media Converters

#### Ethernet Connectivity in Rugged Environments

The Cinch Stratos T2 series media converter is a 2-channel optical transceiver and media converter. Each channel interfaces with up to 1000 MBPS Ethernet electrical signals and converts to/from up to 1000 MBPS optical signals.

The optical interface uses a TFOCA-II 4-CH connector and supports a variety of optical wavelengths & fiber modes. The rugged circular electrical interface accepts DC power and Ethernet copper signals.

#### Features & Benefits

- Supports Up to 2 GBPS Ethernet Link (2 Channels @ 1 GBPS Each) Over Fiber Between Linked Devices
- Rugged MIL Circular Connector or RJ45 POE for Electrical Interface
- Units are 100% tested at Both Temperature Extremes Prior to Shipment
- MIL-STD-810 Qualified for Temperature, Thermal Shock, Vibration, Mechanical Shock, Humidity & Altitude
- FCC Class A Compliant with Internal & External EMI Sealing
- Built & Tested in the USA
- Internal Construction Includes Use of Tin-lead Solder & Conformal Coating
- Rugged PTFE Anodized Finish & All Stainless-steel Hardware

#### Applications

- Oil & Gas
- Fire & Rescue
- Security
- Shipboard
- Tactical Communications
- Military Communications

T2K-DTL602-24VM-03	10/100/1000 BT	GE (1.25 Gbps)	1310 nm Singlemode	10 km	Yes	Yes

#### Notes:

- Ethernet rates are auto-negotiated on the copper port side to 10 BT, 100 BT, or (in the case of the GigE converter) 1000 BT. The optical link rate is always fixed and does not change regardless if the copper side is auto-negotiated down to a lower rate. The Near End and Far End Optical Converters must match the optical rate, wavelength, and fiber type (singlemode or multimode) for proper operation.
- Link distances may be improved by using higher bandwidth rated fiber. For example, using OM4 rated multimode fiber could extend GE optical link distance to 2 km.

## TFOCA Media Converters

### T2 Series DTL Media Converter

### TFOCA Cross Channel Option (-03 versions)

Cross Option	Electrical RJ45	Optical TFOCA
No (BLANK, -01)	Chan 1	P2/S2
	Chan 2	P1/S1
Yes (-03)	Chan 1	P1/S1
	Chan 2	P2/S2

**Notes:**

Historic versions of the Stratos Media Converters use TFOCA P2/S2 pin and socket for Channel 1. This nomenclature has been preserved in order to provide backwards compatibility to those older systems.

The electrical signals are transformer coupled into a Physical Layer Device (PHY), buffered, and then regenerated into up to an optical data stream. The optical data stream is then routed to an internal optical transceiver to create the optical signal. The optical signal is routed to the TFOCA-II compatible connector interface for direct connection to a tactical optical cable.

The media conversion process is compliant to the IEEE 802.3 specifications for Fast Ethernet 100 BT and 100 BFX, as well as the IEEE 802.3Z specifications for Gigabit Ethernet 100/1000 BT and 1000 BLX. The Ethernet connection supports auto-negotiation for 10/100/1000 BT interfaces. In the case of auto-negotiation to a lower ethernet rate on the copper link, the optical link is always at the fixed rate of either 125 Mbps (T2F series) or 1.25 Gbps (T2K series). The Ethernet connection also supports auto-cross to automatically support both crossed and un-crossed ethernet cables.

DC Power is supplied to the entire converter (to both channels) through the circular DTL connector.

### Optical Pinout and Cross Options

Pin/Socket	Cross = NO (blank or -01)	Cross = YES (-03 suffix)
P1	<b>RX2</b> - Channel 2 Optical Input	<b>RX1</b> - Channel 1 Optical Input
S1	<b>TX2</b> - Channel 2 Optical Output	<b>TX1</b> - Channel 1 Optical Output
P2	<b>RX1</b> - Channel 1 Optical Input	<b>RX2</b> - Channel 2 Optical Input
S2	<b>TX1</b> - Channel 1 Optical Output	<b>TX2</b> - Channel 2 Optical Output

**Notes:**

**Cross option = YES** applies to part numbers that end in "-03" only.

For example, T2F-DTL002-24VM-03 or T2K-DTL002-24VM-03.

Link control options (-01 or -03 suffix) will force the copper Ethernet link to a disconnect state when the optical link goes down. When the optical link is re-established, the Ethernet is reconnected. In this fashion, the host system is able to detect no connectivity unless both the copper and optical link are up.

Media Converters without link control (blank suffix) leave the copper Ethernet link always connected, regardless of the state of the optical link.
